

The One to Sync Your Mood With

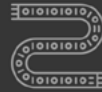

This newly-designed RGB Driver is ideal for those looking for colorful lighting or anyone who simply wants to reduce their electricity bills. It is true that smart lighting solutions are getting more popular day by day, but not all of them come with functional features.

Our new RGB driver is Zigbee 3.0 compatible and offers a lot more than quality performance. You can add more visual effects to your home space and cost-effective LED light control.

This driver helps with color adjustment, dimming, and turning LEDs on and off. In other words, you can mount it in any room with any LED lighting type, and set the lights, shade, and intensity within seconds.

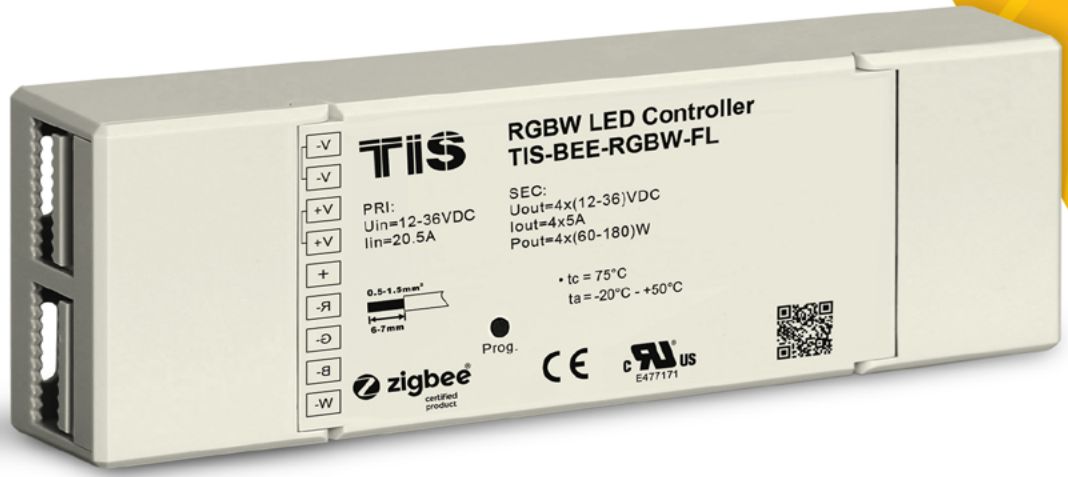

You can also use your smartphone to tune the lighting to suit your mood. So, spice up the next sporting event with the color combination of your favorite team's flag and liven up your experience.

The only thing you need to keep lighting in harmony with your home aesthetics is the Windows software or your TIS application. This driver's straightforward navigation makes it super easy for everyone to create the right mood with colorful shades of lighting.

We know there is no definitive 'best' product for LED light control, but we promise you that with this driver, you won't need to look any further.
