

One to Outrun All

TIS-BEE-PLUG

Smart plugs are a big deal nowadays, as they come with a compact and portable design and are applicable for all standard back boxes.

TIS offers its new Zigbee-powered smart plugs, fashioned to make home appliances controllable over the internet. If you're in the market for an inexpensive piece of technology to control the lights and small appliances, take a look at our plugs.

Power outlets exist everywhere, but they remain dumb even in a smart home. Smart plugs, however, are designed as an add-up that can allow you to control, manage, and monitor your digital devices.

Not only can you be sure about the connection stability of your appliances, but you can also define specific scenarios and presets for the utmost convenience. For instance, without worrying about short circuiting anything, set the coffee maker to wake you in the morning with the refreshing smell of hot coffee.

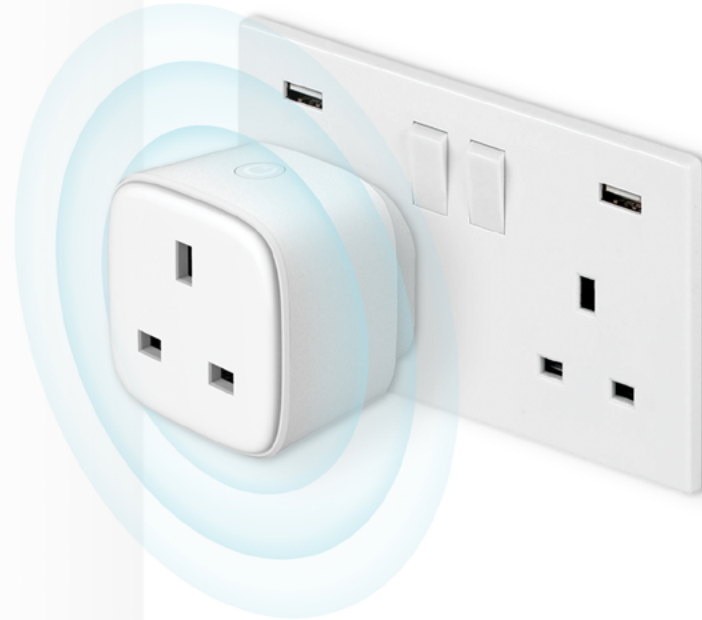

Or, pair these plugs with your smart hub to unlock their remote control capability, so the next time you're away and concerned about your kids' exams, you can manage and limit their video game time; just turn off the game console via your smartphone!

Whether you have UK or EU-style outlet boxes, just stick our smart plugs in and start controlling whatever you plug into them.

We think big and use small devices to make big changes. Because that's the beauty of it.
