CONTROL EVERYTHING

TIS BEE

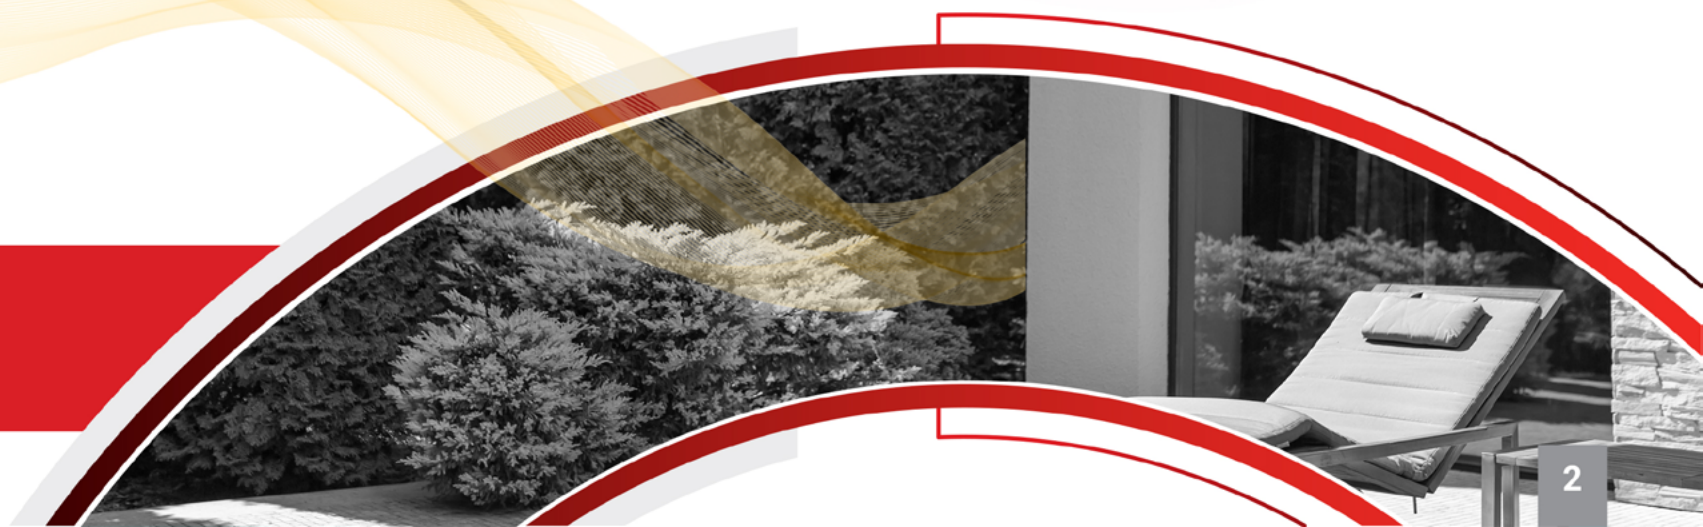

Sirens are the most common devices employed to enhance a property's security. A product of TIS-Zigbee integration, our new Siren is specifically designed to cover various smart needs with an affordable price tag.

It can act as a voice prompt, emitting a loud sound in case of emergencies. It also activates an audible alarm sound if other security sensors around the house detect smoke or moisture leaks, so you don't need to worry about being busy in the backyard and missing the alarm; you will always be able to take action in time.

Its red flasher is another way in which it informs you of danger. You can mount this portable signaling device in hallways, front-door spaces, kitchens, and so on. So, for instance, even if the radio is streaming your favorite podcast at the highest volume, you will still be able to hear the alarm and secure your property.

Another feature of this device is that it is capable of working with your TIS security module, so notifications can be sent to your smartphone, updating you about any possible hazards.
